

**Your key to
energy savings
and cost
reduction.**

***Frees can help lower you energy needs!
Let us tell you how!***

Change Your Filters

Something as simple as regularly changing your filters will help insure that your system is:

- Performing as it was designed
- Continuing to operate efficiently
- Protecting your workers from harmful fumes or dust

Tune-up Your Existing Equipment

A tune-up can provide you with:

- More efficiency from your Frees Directed Air Flow System™
- Lower maintenance costs
- Longer life span of your equipment
- Fewer breakdowns and less down time

Install Direct Digital Controls On Your Existing System

Installing DDC controls will allow you to:

- Reduce energy costs
- Reduce equipment run time
- Automatically cycle equipment off or on
- Monitor your process conditions through a web browser on your PC

Install An Energy Recovery (Heat Reclaim) System

Frees can design an economical energy recovery system that reclaims the energy from the heated or cooled exhaust air and transfers that energy to the incoming outside air. This will significantly reduce your energy costs and energy usage!
